

CET138 Full Stack Development

Assignment 2

This assignment will be worth 70% of your overall module mark.

In this assessment, we are assessing the skills you have developed so far in the following areas:

- Configure and deploy dynamic web applications to a web server
 - Develop a complex dynamic data driven website using a web framework
-

Scenario

Cities across the UK have decided to host a national e-sports competition where individuals or teams can compete in various gaming categories to be crowned the ultimate e-sports champions.

The event will be called **UK E-Sports League**.

The format of the event will include ten mini pop-up gaming tournaments held across the country in major cities. Each tournament will last for 3 days and will feature high-tech gaming setups capable of tracking players' scores, in-game performance metrics, and overall rankings. Each participant will compete as part of a team in only one tournament. Prizes will be awarded in categories such as age, gender, and team performance.

Participants will also have the option to register their details to receive event related merchandise.

Winning participants from each city will advance to the national finals, where the best players and teams will compete for the title of national champions.

Task 1 - Dynamic web application and deployment

The event organisers are having trouble keeping their development staff and unfortunately the lead web developer has resigned from their job.

They were in the middle of building a website for **UK E-Sports League** to allow functionality for users to:

- Register for merchandise
- Login in to a restricted admin area of the website
- Search for current participants and teams
- Update the kills and deaths of the participants
- Delete current participants

Some of the work has been done for you. They have left you with a zip file containing some of the web files you will need and the SQL file for the database. The web files are not complete and it will be your job to finish the project.

You are not required to modify the filenames of these pages, or to change the way they link together. You are also not required to modify the database structure in any way. Doing so will jeopardise your assessment submission.

Project files can be found here: [esports](#)

Project requirements:

Register for merchandise

Complete the register interest functionality so that users can sign up to register their details to receive merchandise.

This form should be validated so that the form can't submit unless all entries are completed.

This information should be saved in the **merchandise** database table.

Login and Logout

The administrative sections of the website should be accessed via a secure login area. Only the admin staff for the event should be able to access this and they must use the following credentials:

username: **admin**

password: **password123**

The admin area should allow an admin to access the edit participant page, delete participant page, search page and the logout page.

A database record matching these credentials can be found in the **user** table.

Edit participant scores

Allow users to update the kills and deaths for each participant. These are the only two fields that the user should be able to update for each participant. Participant data can be found in the **participant** table.

Delete participants

Allow users to delete participants. Necessary validation should be included to limit accidental deletion and human error. Participant data can be found in the **participant** table.

Participant and team search

Users should be able to search for individual participants by either their email or gamertag. This should then show the user all the information about that participant. Participant data can be found in the **participant** table.

Users should also be able to search for teams by the team name. They should be able to see all of the players associated with that team. This page should also calculate and display the kill / death ratio for each player, as well as the kill / death ratio for the team. Team data can be found in the **team** table.

Validation

The event organisers want to ensure that this system is as robust as possible so they would like you to implement as much validation as you can.

Website styling

The website currently has no styles associated with it. The event organisers would like you to apply a suitable styling framework, such as bootstrap, so that the website is attractive to look at and easy to use. They would also like this website to work well on a mobile phone.

Submission requirements

Please submit a zip file containing all of the files associated with your website.

Please check canvas for the submission deadline.

Grading Grid

Register Interest 15 marks	High marks 15 - 11 Functionality works as it should with no errors	Mid marks 10 - 6 Functionality works with possible improvements, or partially works	Low marks 5 - 1 An attempt has been made at the functionality but this either does not work as intended or it is incomplete.	No attempt 0 No attempt at this functionality
Login and Logout 15 marks	High marks 15 - 11 Functionality works as it should with no errors	Mid marks 10 - 6 Functionality works with possible improvements, or partially works	Low marks 5 - 1 An attempt has been made at the functionality but this either does not work as intended or it is incomplete.	No attempt 0 No attempt at this functionality
Edit participant scores 15 marks	High marks 15 - 11 Functionality works as it should with no errors	Mid marks 10 - 6 Functionality works with possible improvements, or partially works	Low marks 5 - 1 An attempt has been made at the functionality but this either does not work as intended or it is incomplete.	No attempt 0 No attempt at this functionality
Delete participants 10 marks	High marks 10 - 7 Functionality works as it should with no errors	Mid marks 6 - 4 Functionality works with possible improvements, or partially works	Low marks 3 - 1 An attempt has been made at the functionality but this either does not work as intended or it is incomplete.	No attempt 0 No attempt at this functionality
Participant and Team search 15 marks	High marks 15 - 11 Functionality works as it should with no errors	Mid marks 10 - 6 Functionality works with possible improvements, or partially works	Low marks 5 - 1 An attempt has been made at the functionality but this either does not work as intended or it is incomplete.	No attempt 0 No attempt at this functionality

Validation 10 marks	High marks 10 - 7 The website is robust and all necessary areas of the website are validated with both serverside and clientside validation	Mid marks 6 - 4 A good attempt at validation has been made, but there is room for improvement.	Low marks 3 - 1 An attempt to validate the website has been made, but there are many areas that require improvement	No attempt 0 No attempt at this functionality
Website styling 10 marks	High marks 10 - 7 The website has been suitably styled using a web framework and it works well on a mobile device.	Mid marks 6 - 4 A good attempt at implementing a web framework for styling the website but areas could be improved.	Low marks 3 - 1 An attempt has been made at implementing a styling framework but significant improvement can be made.	No attempt 0 No attempt at this functionality
Website deployment 10 marks	High marks 10 - 7 The website has been successfully deployed to a webserver and everything is working correctly	Mid marks 6 - 4 The website has been deployed to a webserver but some things are not working correctly, such as a broken link or missing file.	Low marks 3 - 1 The website has been deployed to a webserver but the website does not work as intended. For example it might have many missing files, many broken links or have been placed in the wrong directory.	No attempt 0 No attempt at this functionality
